

BATTERY INFORMATION

Very rarely is a battery faulty, a battery fails mainly from not knowing how a battery works and from neglect. Always follow instructions provided with each battery. Listed below are a few pointers to follow.

CONVENTIONAL BATTERIES

ACTIVATION - Remove filler caps / plugs, remove and discard breather cap.

Fill battery with electrolyte up to upper level indicated on battery.

Do not over fill battery and do not fill with distilled water.

Leave battery to stand for 30 minutes, if acid level has fallen top up as required using electrolyte not distilled water. *Distilled water should only be used to top up batteries in the future.*

A battery must be fully charged before use, so an initial charge is required (only use a recommended charger **See pages 258-260**).

Charge battery for 3 to 5 hours at a current 1/10 of the stated battery capacity e.g. 12 AH requires 1.2 Amp

While charging check acid level and if required top up with distilled water to upper level, then charge for a further 1 hour at the same rate allowing the distilled water and acid to mix.

When charging is complete replace filler caps / plugs, do not obstruct breather outlet and fit breather tube as required, making sure that the tube is not trapped and not kinked in anyway.

MAINTENANCE - Check regularly the battery, terminals and acid level. If level drops below lower level, top up with distilled water.

Maintain battery in a charged condition, always charge fully if battery becomes discharged.

When battery is not in use, keep battery fully charged and acid level up to upper level.

Batteries not in use must be charged at least once a month, note: when charging filler caps / plugs must be removed and only use a recommended charger following instructions provided

MAINTENANCE FREE - SEALED TYPE BATTERIES

ACTIVATION - Remove sealing foil covering filling holes, fill battery with electrolyte supplied with battery following instructions enclosed with battery.

When all electrolyte supplied with battery has drained into the battery you must leave the battery to stand for 1 hour.

New activated batteries require an initial charge, after adding electrolyte a new battery is only about 80% charged.

The battery should be charged to at least 12.8 volts or more (only use a recommended charger **see page 258-260**) following instructions provided on the battery.

When charged, seal battery with caps provided and press down firmly, when sealed there is no need to replace caps or add electrolyte.

MAINTENANCE - *Although they are called maintenance free batteries, they still need to be maintained.*

Check batteries at least once a month on a regular basis when in use, more so when not in use, for a battery will always discharge quickly especially if stood for any long periods of time and having alarms fitted etc. If battery voltage drops below 12.4 volts the battery requires charging, fully charged batteries should read 12.8 - 13.0 volts.

If battery reads 11.5 volts or less the battery has become over discharged and its internal resistance may be too high to charge at a normal charge voltage, so it may be necessary to raise voltage of the battery to 20 volts max and charge for 5 minutes approx, if ammeter shows no change after 5 minutes a new battery is required. Remember a battery will always discharge, only use recommended battery chargers and follow instructions carefully.

Always use this type of battery in an upright position, never on a tilt or on their side.

MAINTENANCE FREE - FACTORY ACTIVATED BATTERIES

Please follow instructions supplied with battery regarding charging and maintenance.

Always use a recommended battery charger **see page 258-260**

***** Never over charge a battery. *****

BS BATTERIES

BS-BATTERY is one of the largest and most innovative lead-acid Powersport battery supplier, present in both OEM and aftermarket fields, and covering a full range of motorcycle, scooter, ATV, watercraft, snowmobile, and utility vehicles applications

BS Powersports batteries have been developed according to a proper technology elaborated by BS's engineers.

Production process for all BS batteries is directly inspired by the process in place for high quality industrial batteries.

BS Batteries perfectly deal with the four typologies of M/C batteries: Conventional, Maintenance Free, Factory Activated & Gel BS Battery has shown a clear expertise in Factory Activated (FA) and Gel batteries.

BS-Battery product range fully cover the entire Powersport market: More than 200 battery types have been developed (+ 200 relative with acid pack)

FACTORY ACTIVATED (SLA)

These batteries have all the features of a Maintenance Free with increased power due to a radial grid design and additional plates.

THE MAIN ADVANTAGES OF SLA BATTERIES ARE :

- Factory activated and ready to go
- Higher life cycle (up to three times longer than conventional batteries)
- Easy to install (no risk of acid filling leak)
- Plate sulfatation minimized

These batteries are perfectly suitable for motorcycles, scooters, ATVs (All Terrain Vehicles), UTVs (Utility Vehicles), watercrafts, snowmobiles and lawnmowers.

MAINTENANCE FREE (MF)

This technology also called VRLA (Valve Regulated Lead Acid) represents sealed batteries with gas recombination which brings less maintenance with no water refilling needs. These batteries are supplied with acid pack, and would be activated by filling the acid before first use.

THE MAIN ADVANTAGES OF MF BATTERIES ARE :

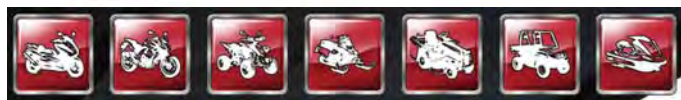

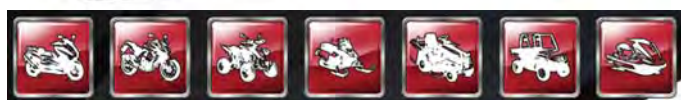

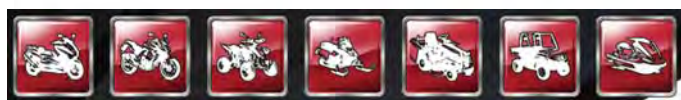

- Reduction of plate sulfatation
- Higher life cycle (up to three times longer than conventional batteries)
- Less maintenance (no water refilling needs)
- Longer voltage hold

These batteries are perfectly suitable for motorcycles, scooters, ATVs (All Terrain Vehicles), UTVs (Utility Vehicles), watercrafts, snowmobiles and lawnmowers.

CONVENTIONAL

Conventional batteries are lead acid flooded batteries. These batteries could be delivered dry charged with or without acid pack, and need to be filled before first use. Conventional High Performance batteries include a sulfatation retardant technology which reduces battery-killing plate sulfatation. This means longer life for the batteries, especially in standby or storage mode.

These batteries are perfectly suitable for motorcycles, scooters, ATVs (All Terrain Vehicles), UTVs (Utility Vehicles), watercrafts, snowmobiles and lawnmowers.

BS Battery BTZ10S for new 2013 MV Agusta F3 & Brutale models.

BS Battery has been selected by MV Agusta as Original Equipment of the new 2013 3 cylinders F3 & Brutale models.

It is a great recognition for BS Battery for the quality and the performance of their production.

MV Agusta has chosen the sealed and factory activated BTZ10S battery type, which benefits from the BS advanced battery technology, providing high performance, extreme vibration resistance and extended service life.

BS Battery products are widely available with more and more dealers offering them as an efficient battery solution for most current street and sports bikes on the market.

BS BATTERY CHARGERS

BA10 6V/12V - 1A AUTOMATIC CHARGER & MAINTAINER

AUTOMATIC CHARGE

Automatically stops charging when the battery is fully charged.
No need to unplug, charger never overcharge the battery.

AUTOMATIC MAINTENANCE

When the Battery is charged to "full" state, the charger automatically switches to maintain the battery. It will monitor the battery voltage and continue to peak performance to the Battery

SHORT CIRCUIT & REVERSE POLARITY PROTECTION

Prevents from sparking due to the reserve connection or short circuit.
The charger will automatically turn off to prevent any damage.

- 6V/12V Voltage Output Selection
- BA10's Voltage Switch allows to charge different battery Types & Sizes with the same charger.
- Three level charge control
- Internal over-heat protection
- Corrosion-resistant output connectors
- Output clips and Ring terminals provided

DESCRIPTION	ORDER REF
6v/12v - 1a BS Automatic Charger	BS10
Fused Ring Terminal Leadset	PA01

BS15 12V - 1.5A SMART AND AUTOMATIC CHARGER

With patented Reconditioning and Temperature Compensation Functions
Multi-Stages Smart Charger

- Reconditioning Stage
- Soft Start Stage
- Bulk Charging Stage
- Absorption Stage
- Float Stage

Microprocessor controlled, Reverse Polarity & Short-Circuit Protection, Internal Overheat Protection
BS Isolated Clamps and Fused Ring Connections provided

100% Automatic Charge & Maintenance

When the battery is fully charged, the charger automatically switches to maintain the battery. No need to unplug the battery: No overcharge

Speed, Secure & Smart Charge

Short-circuit and reverse polarity protection prevents from sparking, turning off the charger automatically to prevent any damage. Reconditioning function revitalizes tired batteries

Temperature Compensation Function

ATS (Ambient Temperature Sensor) allows to detect the ambient temperature (that can change according to the environment). BS15 will adjust the charging program accordingly.

DESCRIPTION	ORDER REF
12v 1.5a BS Smart Automatic Charger	BS15
Fused Ring Terminal Leadset	PA01

BS BATTERY CHARGERS

BS20 12V - 2A SMART CHARGER

Charger & Maintainer Reconditioning Function

Multi Stage Charger:

- Manual Rejuvenation
- Soft Start
- Bulk Charging
- Absorption Charging
- Maintenance Charging

High frequency switching mode, full time pulse charge output

LEAD ACID / GEL Battery selectable

Battery refresh function provided, Ideal for charging during winter season

Corrosion-resistant output connectors

Output short circuit, reverse polarity & overload protection

Internal over heat protection

Battery thermal run away protection

Microprocessor controlled

BS Isolated Clamps & Ring Terminals provided

PA01

DESCRIPTION	ORDER REF
12v 2a BS Smart Charger	BS20
Fused Ring Terminal Leadset	PA01

BK10 10 CHANNELS BANK CHARGER

12V 2A - 20A Lead-Acid Batteries Designed For The Workshop

10 x
1 Amp

BS
CHARGER

**" IDEAL FOR WORKSHOPS AND WAREHOUSES,
DEDICATED TO ALL 12V LEAD ACID BATTERIES "**

This product is fully dedicated to professionals, and is designed to be used in a **warehouse** or in a **shop**.
This product provides an **efficient quality service** : an easy and fast way to charge batteries before delivery or shipment.

FOR DISTRIBUTORS

- Charges and Maintains all types of 12V Lead-Acid batteries GEL, AGM and Standard
- Charge level can be maintained during shelf life
- Easy to use : 100% automatic

FOR RETAILERS

- A must-have product for daily use
- The ultimate powersport shop charger & maintainer
- Allows to sell batteries delivering their peak performance

10 CHANNELS BANK-CHARGER & MAINTAINER

10 plugs providing 1 amp each are available for charging and maintaining batteries. Internal over-heat protection provides safe use.

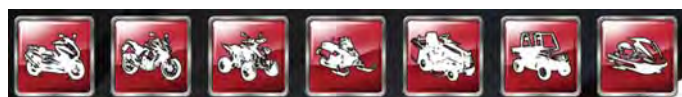

AUTOMATIC CHARGE & MAINTENANCE

When the battery is fully charged, the charger automatically switches to maintain the battery. No need to unplug charger, it never overcharges the battery.

SPEED & SECURE CHARGE

Allows to charge and to maintain 10 batteries at the same time. Short-circuit and Reverse polarity protection prevents from sparking turning off the charger automatically to prevent any damage.

DESCRIPTION	ORDER REF
10 Channel Bank Charger	BK10

DATATOOL BATTERY CHARGER

BATTERY CONDITIONER

MARKET LEADING BATTERY CONDITIONER WITH ON BOARD DIAGNOSTICS.

Features	Benefits	
Continuous 4-stage cycle	Permanently fully charged battery	
1.2 amp charging	Faster charging	
Accessible trailing lead	No need to directly access battery	
On-board diagnostics finding	Helps with battery and bike fault Will charge your car as well	

- » Suitable for standard lead acid, sealed and maintenance free 12 volt batteries
- » Charger rate of 1.2 amps during initial bulk charge
- » Holds charge at 14.3 volts until fully charged
- » Charging drops to 13.6 volts after fully charged to maintain battery in a charged state without damaging the cells
- » Recycles the charging sequence should the charger detect a voltage drop
- » LED system to indicate battery condition
- » Recovers semi-sulphated batteries
- » Charger cannot overheat due to in-built automatic temperature regulation
- » Protected against short circuit connection
- » Protected against reversed polarity connection
- » Indicates incorrect polarity connection
- » Supplied with bolt-on, water resistant battery fly-lead connection systems and temporary battery clamps
- » 2 year manufacturers warranty Battery

NGK SPARK PLUGS

SPARK PLUG DESIGN

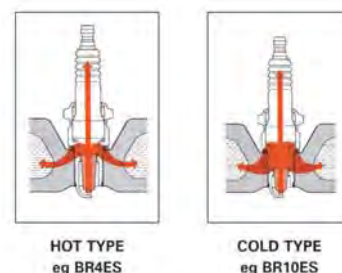

Every year the range of NGK spark plugs grows to accommodate the ever increasing demands of modern engines. Spark plug design must take into consideration many features of an engine including physical dimensions, combustion chamber shape, cooling abilities, fuel and ignition systems. Spark plugs play a vital role in producing the maximum power from an engine whilst keeping fuel consumption and emissions to a minimum. Choosing the correct spark plug type will help a vehicle manufacturer meet legislated emission targets and assists the motorist in getting the best from his engine. Increases in the size and the requirement to improve the cooling of the inlet and exhaust valves have meant that the space available for the spark plug is severely restricted on some cylinder heads. A change in spark plug design, possibly the adoption of a taper seat and extended reach (threaded portion) or even the use of a smaller diameter is often the answer. Some engines require the use of two spark plugs per cylinder and again due to space restrictions these might be of different sizes. Changes in fuelling systems and the fuel itself have meant some special features being adopted at the 'firing end' of the spark plug. Extra projected types push the spark position into the heart of the combustion chamber to promote better combustion of the fuel/air mixture, which is weaker than ever in an effort to improve economy. Modern engines manufacturers often require increased spark gaps to allow a longer spark duration, which again aids more efficient combustion.

To combat the 'cold fouling' effect that can occur in some engines using unleaded fuels specially arranged ground electrodes are sometimes used. These can force the spark to discharge across the insulator and thus burn away any built up carbon that could cause poor starting or misfires. It is not uncommon to find two, three or four ground electrode arrangements in new vehicles. The use of precious metals on the tips of the spark plug electrodes is not uncommon especially on higher performance engines. Whilst these spark plugs do have increased service life they are often specified because of their superior ignition qualities. Our engineering departments work very closely with the engine and vehicle manufacturers to produce the ideal spark plug type for each application. Any change in production is expensive for a manufacturer and therefore new spark plug types are only produced where necessary. NGK employ the very latest production technology to ensure that every aspect is catered for – performance, economy and value.

HEAT RANGE AND HEAT DISSIPATION

Spark plugs do not produce heat in the combustion chamber. One of the functions of the spark plug is to dissipate some of the heat produced during combustion. This is mostly transferred into the cylinder head. The 'Heat Range' indicates the measure of the spark plug's ability to do this. A 'hot' spark plug is designed to maintain a sufficiently high temperature at the insulator nose to burn off carbon and oil deposits. A 'cold' spark plug is designed to allow a faster transfer of heat to the cylinder head thus preventing overheating and premature failure. The heat range selection is obviously a complex task with many factors to take into account. NGK engineers therefore make specific recommendations for each engine and the use to which it is put.

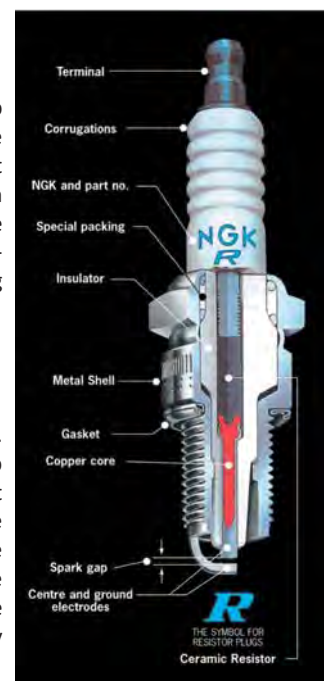

NGK'S COPPER CORE TECHNOLOGY

WIDE HEAT RANGE

A wide range spark plug is more flexible and performs equally well in a hot or cold engine under stop and go city driving or fast motorway cruising. Engines that tend to run hot need cold type plugs. Those that run cold demand a hotter type. The specific plug for any engine is determined by the plug's heat range. That is the minimum and maximum temperatures between which the plug will offer optimum performance. The heat range of NGK Spark Plugs is wider than ordinary plugs therefore they are suitable for both high speed and low speed driving. Compared with conventional plugs of the same pre-ignition rating they have more resistance to fouling. Compared to ordinary plugs with equal anti-fouling resistance, NGK Spark Plugs have a higher pre-ignition rating.

NGK'S HEART OF COPPER

Copper wire used in place of the iron core in conventional plugs is the secret of NGK's Wide Heat Range. Copper's superior heat conductivity dissipates heat quicker. It cools the electrode tip and insulator tip which prevents hot spots that could cause pre-ignition. Increased heat resistance does not affect fouling resistance, which is primarily determined by the insulator nose length. The longer the nose, the more susceptible it is to heat and the more free from fouling. By raising the pre-ignition rating with the high conduction copper and leaving the insulator nose long, NGK produces the Wide Range Plug. One that meets the broad thermal requirements of engines under high and low RPM conditions. With the exception of a couple of older applications all the spark plugs in this motorcycle catalogue employ copper core technology.

NGK SPARK PLUGS

As a result of our policy of continuous research and development NGK can offer special spark plugs designed to give optimum performance under a high range of conditions.

'S' TYPE (E.G. BP6ES)

NGK standard spark plugs with copper cored centre electrodes for wide heat range. Copper's superior heat conductivity dissipates the heat of combustion away from the firing end, preventing hot spots that can lead to pre-ignition. Copper cored electrodes also mean that longer insulator noses can be used to protect against fouling.

'G' TYPE (E.G. B10EG)

These plugs feature a smaller diameter centre electrode tip made of conventional nickel alloy. The smaller diameter centre electrode means the voltage required to produce a spark is reduced. However as the tip is made of conventional nickel alloy the service life is reduced and these plugs are best used in applications where plugs are frequently changed.

'V' TYPE (E.G. B10EV)

The centre electrode of this type is made of gold palladium alloy and is even smaller in diameter than the G type at 1.0mm and has therefore an even lower voltage requirement. Now mostly superseded by 'VX' types.

'GV' TYPE (E.G. B9EGV)

These plugs have a centre electrode of precious metal similar to the V range. In addition the insulator nose is an improved design to allow better gas flow around the firing end. The ground electrode is shorter and stronger, making the GV range more suited for racing applications.

'VX' TYPE (E.G. B8EVX)

These plugs have an even smaller centre electrode (0.8mm) than the V types and this is made of platinum. This combined with a taper cut ground electrode means an even lower required voltage than the V types. The result is better ignitability along with improved starting, idle stability and anti-fouling performance.

'IX' TYPE (E.G. BR8EIX)

Similar in design to the Platinum VX spark plug, the use of the precious metal Iridium allows us to manufacture a spark plug with an even smaller diameter centre electrode (0.6mm) without compromising durability. This extremely small Iridium tip centre electrode concentrates the available electrical energy and combined with the taper cut ground electrode provides the best performance in terms of starting, idling and especially throttle response.

NGK spark plugs are designed using the latest technology to give optimum performance over the engine's entire rev. range. Fitting the correct type of spark plug is essential. Many changes in engine technology has meant changes in spark plug design. Some NGK spark plugs may have a similar appearance, however the internal and or external design can differ sufficiently to cause engine damage should the incorrect part be installed. The examples below display some of the different design features employed in typical motorcycle applications and hopefully help to explain the reason for some application specific part numbers.

CR8EH-9

- Used on some Honda designed engines
- Special thread can only be used in specific engines or the cylinder head will be damaged

CR6HSA

- Centre electrode is 0.2mm wider than CR6HS for improved durability
- Short metal shell design

ER9EH

- Used by Honda, Ø 8mm thread with 13mm hex
- Do not exceed the tightening torque of 0.8 - 1.0kg/m

BR10ECM

- Used by Honda and Suzuki compact plug
- For use where space is restricted

CR9EK, JR9C

- Used by Kawasaki and Suzuki
- 2 ground electrodes for improved durability

B9ECS

- Short ground electrode for strength and to prevent overheating
- For competition use

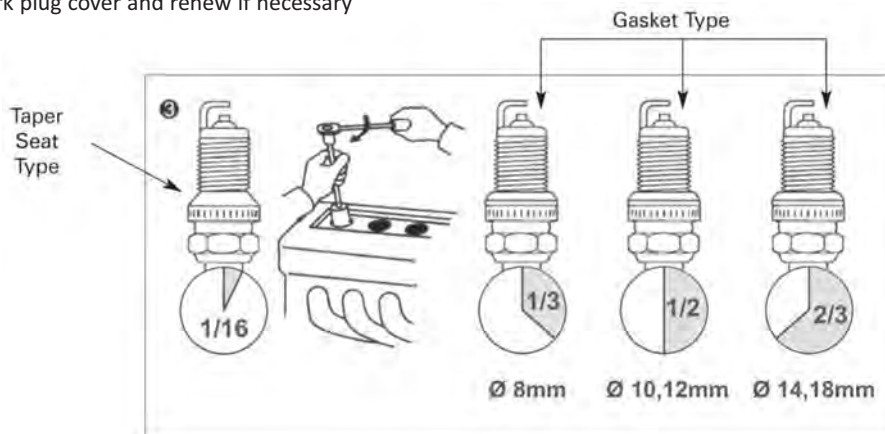

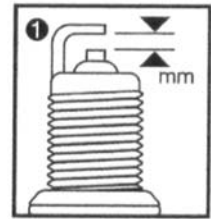

NGK SPARK PLUGS

NGK PLUG INSTALLATION TIPS

- Refer to current NGK catalogue for correct spark plug selection
- Check condition and cleanliness of threads in cylinder head
- Ensure plug is gapped according to vehicle manufacturers specification
- Multi ground electrode and precious metal plugs should not be regapped - visual inspection only
- Install new spark plug *by hand* until it seats - a length of rubber tubing pushed over the insulator can be a useful aid for plug installation where access is difficult
- Tighten to specified torque setting as shown in the chart below
- If torque wrench is unavailable the image opposite will serve as a guide for tightening new spark plugs
- Reused gasket type spark plugs require only 1/12 turn
- Always use the correct tools for removal/installation to prevent damage to the spark plug or engine
- Inspect spark plug cover and renew if necessary

TORQUE TIGHTENING CHART

FLAT SEAT TYPE (WITH GASKET)						CONICAL SEAT TYPE	
THREAD Ø	18MM	14MM	12MM	10MM	8MM	18MM	14MM
Cast iron head	35-45Nm (3.5-4.5kgm) (25.3-32.5lbs ft)	25-35Nm (2.5-3.5kgm) (18.0-25.3lbs ft)	15-25Nm (1.5-2.5kgm) (10.8-18.0lbs ft)	10-15Nm (1.0-1.5kgm) (7.2-10.8lbs ft)		20-30Nm (2.0-3.0kgm) (14.5-21.6lbs ft)	15-25Nm (1.5-2.5kgm) (10.8-18.0lbs ft)
Aluminium head	35-40Nm (3.5-4.0kgm) (25.3-28.9lbs ft)	25-30Nm (2.5-3.0kgm) (18.0-21.6lbs ft)	15-20Nm (1.5-2.0kgm) (10.8-14.5lbs ft)	10-12Nm (1.0-1.2kgm) (7.2-8.7lbs ft)	8-10Nm (0.8-1.0kgm) (5.8-7.2lbs ft)	20-30Nm (2.0-3.0kgm) (14.5-21.6lbs ft)	10-20Nm (1.0-2.0kgm) (7.2-14.5lbs ft)

FIRING END APPEARANCE

Firing end temperature °C Overheating area 870° Optimum temperature area 450° Fouling area Idle Temp { 250° 150°		• Overheating The insulator is white and sometimes blistered. If the insulator temperature is over 870°C pre-ignition may occur. Engine power will be reduced and the piston may be damaged.	• Causes • Over advanced ignition timing • Too lean a fuel mixture • Blocked injectors • Insufficient cooling • Excessive deposits in the combustion chamber
		• Good condition The insulator is brown or light grey.	Even if the spark plug is used under good conditions, deposits will accumulate. Regular inspection and replacement is advisable.
		• Fouling Carbon accumulates on the insulator nose forming a leakage path to earth. The engine misfires resulting in bad starting and poor acceleration. Particularly common with unleaded fuel.	• Causes • Too rich a fuel mixture • Excessive use of choke • Prolonged slow speed driving or idling • Blocked air filter • Spark plug heat range too cold

THE IRIIDIUM IX SPARK PLUG

The Iridium IX spark plug is similar in design to the Platinum VX type but benefits from the use of the precious metal Iridium on its centre electrode. Iridium is harder than other precious metals used in spark plug manufacture, has an extremely high melting point and offers greater protection from chemical attack. These features allow the use of an extremely small diameter electrode (0.6mm) without compromising the spark plug's service life. Combined with the use of the super cut ground electrode this spark plug has superior gas flow properties and lower voltage requirements, which offers further improvements in starting, idling and throttle response. Iridium spark plugs are used by some of the worlds leading race teams and as original equipment in many high performance road and off road machines.

Owners who want the very best performance from their bikes will want the best spark plug and this we can offer with Iridium IX.

The close up section shows the annular gap between the centre electrode and insulator nose which provides cold fouling protection.

Should current try to leak away across a carbonised insulator a spark can occur between the electrode and the insulator thus burning away the carbon deposit

As the IX range now takes over the premium motorcycle spark plug position from the popular Platinum VX range we will be superseding some current versions of Platinum VX types as volume production allows. This will be treated as a running change and therefore orders placed for certain resistor VX types will be fulfilled by supplying the Iridium IX equivalent. Most contemporary machines demand the use of resistor types and most older machines can and do use them quite happily.

Material: Silicon Rubber

*Suitable for use with R5300A- racing spark plugs only

Part No.	Item No.	Colour	Resistor	Ø Plug	Terminal Type
TRS1409	8733	Red	None	14mm	

Description: 90° Compact Type

Material: Silicon Rubber

*Suitable for use with R5540F- racing spark plugs

Part No.	Item No.	Colour	Resistor	Ø Plug	Terminal Type
SD05FGA	8683	Black	5 kΩ	10 - 12mm	

Description: Straight with Grommet

Material: Phenolic Resin

Application: Honda VT600, XL600

The NGK range of resistor covers are designed to give perfect noise suppression across all frequencies whilst engine performance is not adversely affected whatsoever. Featuring a resistor element pressed in between the plug terminal and the high-tension wire connection, the construction is extremely durable, the resistor element is long enough to prevent interior flashover, and steady resistance is maintained. Superlative ceramic materials are incorporated that resist deterioration and have small resistance variation under over-load, whilst the plug connector is made of sturdy phenolic resin, practically oblivious to tremendous heat and high tension, and very rugged rubber material. The heat press insertion makes the construction all the more tough and vibration-resistant. Special rubber liners on both ends prevent moisture from causing electrical leakage. All motorcycle manufacturers now comply with current legislation, which demands a standard of noise suppression on every vehicle. This is achieved usually by fitting NGK resistor covers though in many cases a combination of NGK resistor covers and NGK resistor spark plugs (R type) is necessary to satisfy the ministry tests. It is emphasized that despite the use of both resistor covers and spark plugs in such engines, due to the unique and superior construction of NGK products there is no loss of performance or shortening of service life. Recent additions to the product range are the types LB05EMH and SD05FM being of tough EPDM rubber construction and intended for competition/trial applications.

ATHENA

CDI UNITS BY ATHENA (WITHOUT LIMITER)

CDI01

CDI01 Unit only suitable for Yamaha flywheel machines

CDI03

The main characteristic of the electronic unit NRX-15.3 is the BUILT-IN SPEED LIMITER, which can be activated and deactivated (with the proper locking switch) even when the scooter is running. In case this speed limiter is DEACTIVATED, the electronic unit NRX-15.3 becomes an electronic unit for race that increases the real performance of your engine. If the speed limiter is ACTIVATED, the electronic unit NRX-15.3 reduces the supplied power by limiting the rpm as it detects the rotation speed of your engine. When this speed reaches the pre-set threshold (trimmer rpm), it connects an ignition lag (adjustable by the trimmer DELAY). You can therefore set up the speed limiter regulation according to the desired maximum speed with each type of high performance engine.

Original regulation: 5000 RPM – 0.6 MS = 16 lagging degrees

0.5 MS-degrees = RPM x 0.003

2.0 MS-degrees = RPM x 0.006

1.6 MS-degrees = RPM x 0.009

CDI04

NXR-38 is an electronic unit with fixed advance that keeps the same electric spark intensity, from 0 to 15.000 RPM, IMPROVING THE COMBUSTION AND THE SCOOTER PERFORMANCE. This electronic unit is fed by the battery, and this prevents the breaking of the feeding coil of the stator. The main characteristic of the electronic unit NXR-38 is the BUILT-IN SPEED LIMITER, which can be programmed and activated by a switch. In case this speed limiter is DEACTIVATED, the electronic unit NXR-38 becomes an electronic unit for race that increases the real performance of your engine. If the speed limiter is ACTIVATED, the electronic unit NXR-38 reduces the supplied power by limiting the rpm as it detects the rotation speed of your engine. When this speed reaches the pre-set threshold (trimmer rpm), it connects an ignition lag (adjustable by the trimmer DELAY). You can therefore set up the speed limiter regulation according to the desired maximum speed. Original regulation: 5000 RPM – 0.6 MS = 16 lagging degrees

0.5 MS-degrees = RPM x 0.003

1.0 MS-degrees = RPM x 0.006

1.5 MS-degrees = RPM x 0.009

CDI03

CDI04

CDI05

CDI06

CDI05 Unit only fits Peugeot models without immobiliser
